Project Description

DRIVER evaluates solutions in three key areas: civil society resilience, responder coordination as well as training and learning.

These solutions are evaluated using the DRIVER test-bed. Besides cost-effectiveness, DRIVER also considers societal impact and related regulatory frameworks and procedures. Evaluation results will be summarised in a roadmap for innovation in crisis management and societal resilience.

Finally, looking forward beyond the lifetime of the project, the benefits of DRIVER will materialize in enhanced crisis management practices, efficiency and through the DRIVER-promoted connection of existing networks.

DRIVER Step #1: Evaluation Framework

- Developing test-bed infrastructure and methodology to test and evaluate novel solutions, during the project and beyond. It provides guidelines on how to plan and perform experiments, as well as a framework for evaluation.
- Analysing regulatory frameworks and procedures relevant for the implementation of DRIVER-tested solutions including standardisation.
- Developing methodology for fostering societal values and avoiding negative side-effects to society as a whole from crisis management and societal resilience solutions.

DRIVER Step #2: Compiling and evaluating solutions

- Strengthening crisis communication and facilitating community engagement and self-organisation.
- Evaluating solutions for professional responders with a focus on improving the coordination of the response effort.
- Benefiting professionals across borders by sharing learning solutions, lessons learned and competencies.

DRIVER Step #3: Large scale experiments and demonstration

- Execution of large-scale experiments to integrate and evaluate crisis management solutions.
- Demonstrating improvements in enhanced crisis management practices and resilience through the DRIVER experiments.

DRIVER is a 54 month duration project co-funded by the European Commission Seventh Framework Programme (FP7/2007-2013) under grant agreement no. 607798.

Document name:	D74.4 - First set of promotional materials				Page:	7 of 43

Executive Summary

The present document is a deliverable of the DRIVER project, funded by the European Commission's Research Executive Agency (REA), under its 7th EU Framework Programme for Research and Technological Development (FP7).

Deliverable D74.4 addresses the work carried out under SP7- Impact and sustainability, and more precisely under WP74.2 – Promotional materials, presenting the set of promotional materials that have been produced during the first twenty months of the project (May 2014 – December 2015):

- Logo
- Project reference presentation
- Project (including SPs) posters and roll-up banners
- Project brochure and business card
- Project video trailer
- I4CM video trailer
- I4CM roll-up banner
- Goodies (USB flash drive, pens, bags),

The dissemination activities aim to increase the impact of the project by making it visible to as wide an audience as possible, while focusing on those target users for which the project is most relevant. In particular, this deliverable presents a short overview of the production of the print and presentation materials that have been designed and created in the first twenty months of the project and which will be used for the networking and dissemination of DRIVER. All future printed materials for DRIVER will be based on the designs and templates described herein. Printed materials play a key role in dissemination and networking, as the first impression one gets of the project, which cannot be undone, is imparted by them.

Illustrations of all promotional materials produced at the end of the above mentioned period are included into the present document.

Document name:	D74.4 - First set of promotional materials				Page:	8 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

1 Introduction

The project documentation is an important part of the dissemination and communication activities since, together with the website and social media, it gives high visibility to the project for the promotion of its activities, events and initiatives. The promotional material produced during the course of the project is supporting most other activities, including SP2 (Testbed for Crisis Management experimentation), SP3 (Civil society resilience), SP4 (Strengthened responders), SP5 (Training and learning), SP6 (Joint-Experiments and Final demonstration), SP8 (Assessment & Innovation).

Since the production of promotional material is essential to support the activities of a project and to contribute to its impact, most of the content produced during the course of the project will be made available in printed version, online on the DRIVER website (www.driver-project.eu) and disseminated during both project events and at several external events where the project will be represented. The aim of these activities is to widely contribute in raising awareness on FP7 and Crisis Management, in enhancing a wider participation in the project's activities and in implementing the creation of a network of people interested in Crisis Management in Europe and beyond.

One of the core idea behind the dissemination and communication activities undertaken through the project is to create a DRIVER brand architecture. Therefore, this set of collateral has been elaborated in an attempt to be visually consistent and uses language that coheres around a core narrative.

This document is divided into 3 main parts, the first one briefly presenting the project graphical identity, the second one introducing the first set of promotional materials and possible additional versions created from M3 to M20, and the last part providing insights on future promotional materials to be created as the project further develops and additional specific needs emerge.

Document name:	D74.4 - First set of promotional materials				Page:	9 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

2 Project visual identity

2.1 Project logo

All material used for project dissemination has a well-defined graphical identity, thanks to the use of the DRIVER logo and graphical identity (Figure 1). In a very early phase of the project, options regarding the project logo and the overall project graphical identity have been proposed by the task leader (ARTTIC) to the DRIVER partnership. The logo below has been chosen and used in all the promotional material produced.

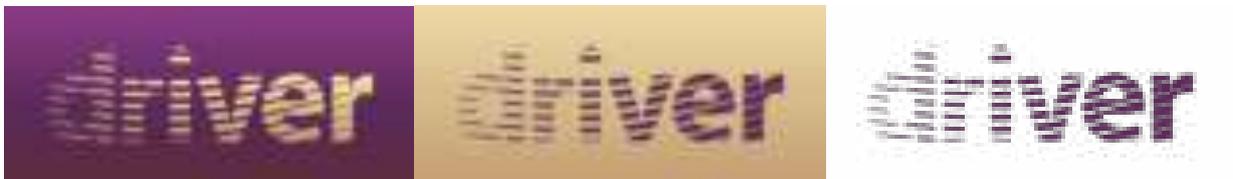

Figure 1: Project logo

In addition, an animated version of the logo has been produced in M18 – November 2015 to be integrated onto the project video trailer (see page 14) which has been projected for the first time on the occasion of the I4CM event in Berlin held from December 8-9, 2015. This animated logo will be used from now on during all events organized by the project consortium.

2.2 DRIVER colour code and picture

The colour code available in D71.1 [1] and the logo of DRIVER shall always be used as well as the font Calibri for the main text and Century Gothic for titles. The Driver logo shown above and to be found on the DRIVER internal website shall always be displayed on all dissemination documents.

Furthermore, any public document shall display the European emblem. The partners are exempted from the obligation to obtain prior permission from the EC to use them. When displayed in association with a logo, the European emblem should be given appropriate prominence.

Document name:	D74.4 - First set of promotional materials				Page:	10 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

3 Promotional materials created up to M20

3.1 Project reference presentation

3.1.1 First version

A PowerPoint presentation containing key information on the project such as objectives, expected outcomes and partnership has been produced by ARTTIC at M2 – June 2014 (see Annex 1 for the full document). This reference PPT presentation has been used by project partners when attending external meetings to introduce the DRIVER initiative, such as the 5th JRC European Network of Crisis Management Laboratory (ENCML) meeting from 16th to 18th June 2014 in Ispra, Italy.

Figure 2: Project reference presentation - first version

3.1.2 Second version

As (i) the project further developed and (ii) a common understanding has been reached by all project partners, an updated version of the project PPT presentation has been produced at M19 – November 2015 to (i) deliver a simplified message to reach the public at large and (ii) convey key messages (i.e. remove the EU-funded projects specific terminology such as WPs, etc.), through a more attractive outlook (see Annex 2 for the full document).

This updated version has been officially presented by ATOS for the first time on the occasion of the I4CM event in Berlin from December 8-9, 2015, and received positive feedback from both the project partners and the attendees.

Document name:	D74.4 - First set of promotional materials				Page:	11 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

This promotional material is available on the DRIVER Space shared with all DRIVER partners.

Figure 3: Project reference presentation - second version

3.1.3 Next steps

In the upcoming weeks, this project reference presentation will be uploaded in the resources section of the project website [2], remaining accessible to the general public.

3.2 Project poster and roll-up banners

A project poster (see Annex 3) was designed by ARTTIC at M3 – July 2014 to give broad visibility to the DRIVER project during project and external events. This A1 format poster introduces the DRIVER project key facts and objectives.

In addition to the poster, two complementary roll up banners (see Annex 4), ideal material to be used during project or external events, were designed by ARTTIC respectively at M18 and 19 – October/November 2015. The first version of the roll-up banner introduces the project partners and the main topic tackled in the project thus allowing to be quickly identified by third parties, while the second one seeks to engage interested stakeholders and encourage them in joining the project community, visiting the website and attending the events.

3.2.1 Next steps

The project poster and roll-up banners will be uploaded in the resources section of the project website [2], remaining accessible to the general public.

Document name:	D74.4 - First set of promotional materials				Page:	12 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

3.3 Project business card

In order to promote the DRIVER project but also the online community (Community Management Platform, see Deliverable D72.2 [3]), the consortium agreed to create a business card (see Annex 5) introducing the DRIVER website, Twitter and LinkedIn groups to the European audience. Partners have been invited to distribute these business cards as widely as possible on the occasion of each event the consortium would organise or contribute to (see Annex 6).

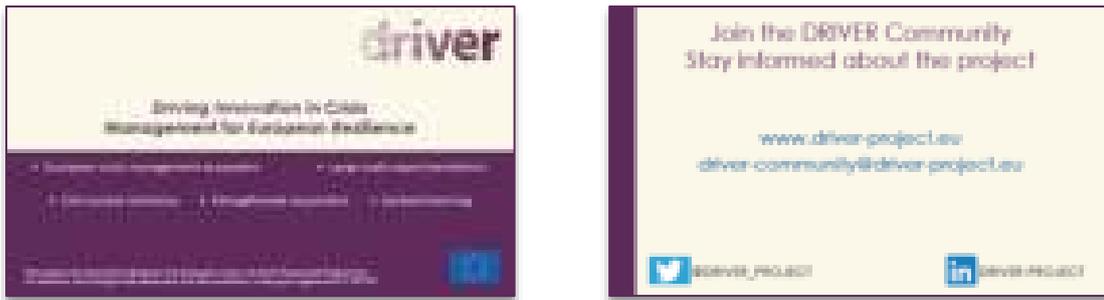

Figure 4: DRIVER Business card

3.4 Project brochure

3.4.1 First version

At M3 – July 2014, ARTTIC produced a three-fold brochure (see Annex 7) to present in more details the project and consortium, its objectives and expected outcomes, and thus provide a better overview of the DRIVER initiative. This brochure has been uploaded in the DRIVER Space (restricted to consortium partners) and has been distributed as widely as possible during each event DRIVER has been organised and contributed to from M3 to M18.

Document name:	D74.4 - First set of promotional materials				Page:	13 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

Figure 5: DRIVER brochure - first edition

3.4.2 Second version

An updated version of the project brochure was produced at M18 – October 2015 (see Annex 8) to provide a more attractive look and feel of the material and respect the graphical identity.

This document, already presented and distributed on the occasion of the second edition of the I4CM event held in Berlin from December 8-9, 2015 has received a very positive feedback from the project partners and participants, and will be distributed as widely as possible during each event DRIVER will organise and contribute to (see Annex 6).

Figure 6: DRIVER brochure - second version

Document name:	D74.4 - First set of promotional materials				Page:	14 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

3.4.3 Next steps

This brochure will be uploaded in the resources section of the project website, remaining accessible to the general public (See deliverable D74.1 [2]). More than 5000 hard copies will be printed and distributed to the project partners so that they can disseminate them during events they will either organise or contribute to. An updated brochure will be produced before the end of the project, when more results and lessons learned will be made available.

3.5 Project video trailer

The trailer is an effective way of presenting the main objectives and activities of the project to the general public, in order to create awareness about the project activities. Therefore, an animated video trailer of the project has been produced at M18 – October 2015. It has been projected and discussed for the first time with the DRIVER partners during the General Assembly held in Lund in November 2015 while showcased for the first time to the general public on the occasion of the second edition of the I4CM event in Berlin.

Following several comments received in Lund by both the partners and the Advisory Board members, the storyboard has been redrafted and a second iteration is currently made to better cope with the consortium's expectations.

3.5.1 Next steps

The trailer will be made available on the DRIVER website and on YouTube as soon as the second version is available.

3.6 I4CM promotional materials

Specific promotional materials have been created on the occasion of the I4CM event, which took place in Berlin on December 8-9, 2015. The objective behind it is to have a specific set of materials to (i) increase the brand recognition, (ii) better promote those project key events and (iii) increase the participation level. These materials are presented below.

Document name:	D74.4 - First set of promotional materials				Page:	15 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

3.6.1 I4CM logo and roll-up banner

One specific I4CM logo (Figure 7) has been produced, using the colours of the DRIVER project.

The bubble shape has been chosen in order to better reflect the key objectives behind such events: providing a dedicated forum for exchanges. The logo will be customized for each edition by integrating the name, place and dates of each of the events.

Figure 7: I4CM logo

In addition to the logo, a generic I4CM roll-up banner (see Annex 9) has been elaborated. A roll-up banner has been created to draw the attention of the audience on the DRIVER project and its internal events. It is an effective way to display the project's visual identity while making sure that the audience clearly knows who the organizer is/which project is behind the event.

3.6.2 I4CM video trailer

Following the completion of the second edition of the I4CM event, a promotional video trailer is currently in the production process. Several onsite interviews of key target stakeholders who have been participating in the event (EC representatives, technology providers, Crisis Management practitioners, etc.) have been conducted while several video and photo shootings of the event sessions, discussions and networking moments have been done. All this materials are currently compiled and will serve as a basis to produce the I4CM promotional trailer. At the time of writing, the video should be made available at M22 – February 2016.

3.6.2.1 Next steps

The trailer will be made available on the DRIVER website and on YouTube and widely disseminated via the project social media accounts as soon as it is released and agreed by all PMC members.

Document name:	D74.4 - First set of promotional materials				Page:	16 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

3.7 SPs roll-up banners (M18)

In order to better support the activities carried out under the project, a set of roll-up banners (See Annex 10) have been created at M18 – October 2015 for each of the « technical » SPs (no mention of SP1 dealing with management issues), to provide an overview of their respective activities, objectives and expected outcomes.

Such roll-ups have been created first to be used internally on the occasion of the project meeting taking place in Lund in November 2015, however, given the positive feedback received by most of the project partners, the roll-ups have been displayed on the occasion of the second edition of the I4CM event in Berlin, to better showcase the project activities to third parties. These materials will be used at other events, either internal or external ones such as specific conferences, experiments, next I4CMs, etc.

3.8 Goodies

In addition to the above mentioned set of promotional materials several goodies (namely, USB sticks, bags and pens) have been produced for the DRIVER project and will be distributed on the occasion of project events or external ones the partners contribute to (see Annex 6).

Document name:	D74.4 - First set of promotional materials				Page:	17 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

4 Planned promotional materials

Additional promotional material such as a project flyer, specific PPT presentations will be developed adapted to specific target stakeholder groups (see Annex 11) to provide a straightforward answer from different constituencies to the questions:

- “What’s in for me?”
- “How can I participate”?

In addition, and in order to provide a proactive and strong support to the experiments, ARTTIC already started to engage in a dialogue with the task leaders to define their needs in terms of production of promotional materials. After a careful analysis of their needs (see Annex 12), ARTTIC will start elaborating the ones identified as of higher relevance to increase the awareness about the activities but also outcomes and lessons learned, in close relation with the experiment leaders.

Proposed materials are for example:

- Interviews of the main actors describing their activities and the outcomes, to be uploaded onto the DRIVER YouTube channel
- Infographics, and other novel techniques for the visual presentation of information, to communicate important project outputs in non-technical language to the broad EU civil society.
- E-books gathering key information from approved deliverables to be made available onto the project website to drive interest of the third parties and make sure they have access to the main results of the project in an attractive and easily readable format.

In order to achieve these objectives, all DRIVER partners, in particular the SP leaders shall actively collaborate with SP7, and ARTTIC to provide the necessary material (key achievements, major outputs etc.) required for the preparation of the content.

Document name:	D74.4 - First set of promotional materials				Page:	18 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

5 Conclusion

Intense activities were developed during the first twenty months of the project, not only to conceptualize, prepare and finalize all dissemination tools and materials planned to be available at the end of month 3, but also those planned at a later date. These efforts have led to quite a comprehensive and powerful set of “Initial dissemination material” able to efficiently support the dissemination and communication activities of the project in the next period on the occasion of other events, either internal or external ones such as specific conferences, experiments, next I4CMs, etc. to increase the project outreach and impact. Obviously, the status reached in terms of dissemination material is not the end of a process: in the next weeks and months, efforts will be maintained to reinforce and extend this set of tools and materials, understand from all project partners what more can be done to support them, especially regarding activities such as experiments, joint experiments and final demo promotion.

The DRIVER brand architecture is a key vector for enhancing public and stakeholder engagement with the project. Therefore, one of the main aims of the dissemination and communication activities must be to simplify what is, on face value, quite complex.

Finally, stronger efforts will be made by the task leader of the Project website to make them available online, so that they can be widely promoted through the social media account of the project and relayed through the project partners’ corporate websites.

DRIVER paradigm

- Crisis management is complex. There is no standard validation in Crisis Management
- Many possible scenarios, many stakeholders (local, regional, national, EU, UN level, etc.)
- Iterative testing in different contexts is needed in series of experiments
- Tools currently tested in real-life operations + space for experimentation is needed
- Evidence based capability development to overcome inertia of innovation in CM
- Encourage these capacities for new solutions (tools) among employers
- Establish a European meeting space for the development of a common CM culture

Adding innovation in Crisis Management for European Resilience

The three dimensions of DRIVER

Adding innovation in Crisis Management for European Resilience

Work Breakdown Structure

- SP1 Project management (40% team)
- SP2 Tool-based (70% team)
- SP3 Joint experiments & Final demonstration (Data Edge France, Technical level, SA (Germany))
- SP4 Impact & sustainability (level 40% France)
- SP5 - Supporting Information & Analysis (Knowledge 10% Germany)
- SP6 - Independent Monitoring (40% France)
- SP3 Core: Resilience Australia, Real Crisis (public), National level, HQ, SA (Germany)
- SP4 Strengthened responders: Three, Comprehensive (France)
- SP5 Enhanced Learning (10% The Netherlands)

Adding innovation in Crisis Management for European Resilience

Science & Technology Objectives

- Development of a Pan-European tool set
 - Physical & virtual components (exercise rounds with live simulation)
 - Methodology, Sustainability
- Development of a tested and validated portfolio of crisis management tools
 - Solutions for civil resilience
 - Structures for professional response
 - Methods and infrastructure for individual and organisational learning
 - Operational, policy & legal issues & standards
 - Societal expectations
- Creating a shared understanding of Crisis management in Europe

Adding innovation in Crisis Management for European Resilience

DRIVER VISION

- DRIVER tool-based CM capability development and DRIVER portfolio of tools help professional responders and analysts to effectively cope with crises by addressing their needs
- Create a more comprehensive view on crisis management & develop a common European CM culture and understanding
- Achieve innovation based on testing and adoption of existing tools & ideas
- Design integrated solutions that build long-term societal resilience to help crisis managers work in, and with communities affected by crises
- Improve and demonstrate the effectiveness of learning solutions aimed at improving the crisis management competences of professional responders
- DRIVER Community for sustainable tool-based crisis management represents the organisational platform to support the impact & sustainability of DRIVER

Adding innovation in Crisis Management for European Resilience

DRIVER experiments

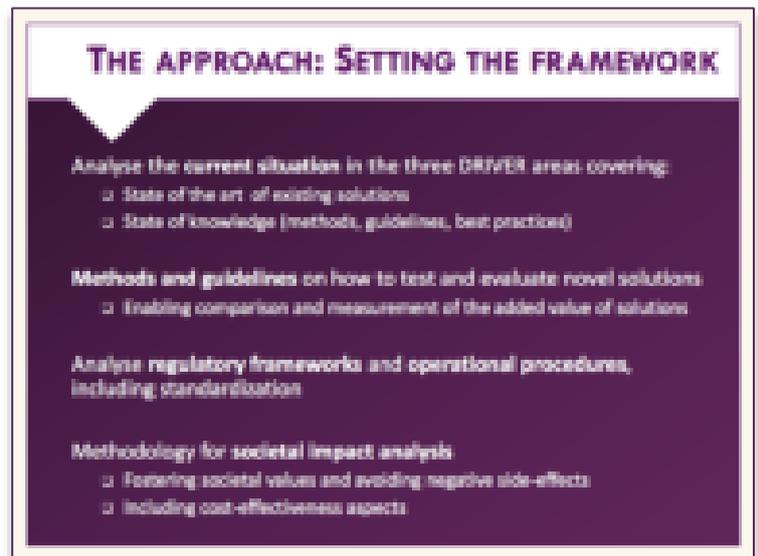

A progression of experimental campaigns of increasing complexity and the final demonstration:

1. Tool prototyping and development & testing
2. SP National experimental campaign
3. SP National experimental campaign

Adding innovation in Crisis Management for European Resilience

Document name:	D74.4 - First set of promotional materials			Page:	22 of 43
Reference:	D74.4	Dissemination:	PU	Version:	2.0
				Status:	Final

Annex 2: Project reference presentation (second version)

Document name:	D74.4 - First set of promotional materials				Page:	24 of 43	
Reference:	D74.4	Dissemination:	PU	Version:	2.0	Status:	Final

THE APPROACH: THE EXPERIMENTS

1 Defining and designing experiments following specific methodologies

Review and enhancement of use

2 Integrating, testing and evaluating emerging solutions

- Identifying business and research questions
- Using specific scenarios
- Comparing with existing systems (benchmark approach)
- Reporting to specific (internal) stakeholders and managers
- Involving (Risk Management) professionals and/or (local) industry (stakeholders)

Emerging solutions

THE APPROACH: CAMPAIGNS OF EXPERIMENTS

Conducting iterative campaigns of experiments:

- Starts in complexity
- Number of integrated solutions
- Iterative (learning effects, larger scale, cross-border aspects)
- Towards a Final Demonstration

Expected output of experiments:

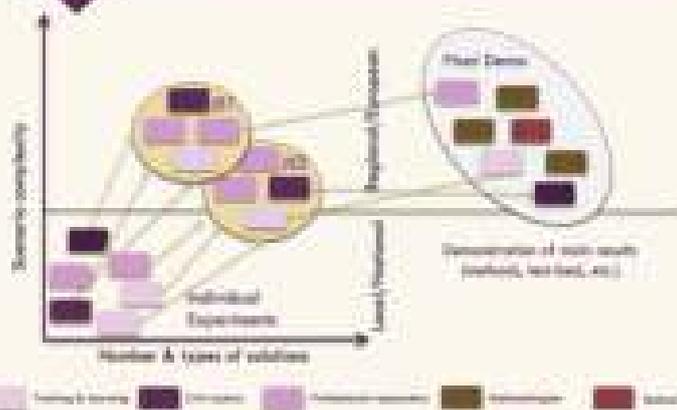

- Assessment of the operational benefits / added value of the solutions
- Recommendations for improving the solutions
- Lessons learned: from the experimentation process

Evaluate solutions using DRIVER methodologies:

- Cost effectiveness
- Societal impact
- Related regulatory frameworks and procedures

"CAMPAIGNS OF EXPERIMENTS"

EXAMPLE OF EXPERIMENT:

"OPERATIONAL DATA LIFT"

Scenario:
A forest fire with cascading effects involving chemical threat

Objective:

To test the operational benefits of the adoption of a Common Operational Picture (COP) approach (as a standardized approach to collecting and bringing information together and making it immediately available for all involved parties)

EXAMPLE OF EXPERIMENT:

"OPERATIONAL DATA LIFT"

Notes: Played on a simulator by professional first responders

Process:

Comparison between existing tools and innovative COP based solutions

- Analyse and optimize results
- Measure time, accuracy, usability

Outputs:

- Lessons learned from the adoption of the innovative solutions tested
- Feedback on the DRIVER experiment design methodology
- Insights on the usage of the simulator for searching innovative solutions

DRIVING INNOVATION IN 3 AREAS

COMPLEMENTARITY

Civil society resilience

To understand and improve the resilience capacity of individuals, communities and local governments during the prevention, preparation, response and recovery phases

Training and learning

To demonstrate the effectiveness of learning solutions, enhance them and share competences and lessons learned

Strengthened professional responders

To improve the efficiency of the crisis response, usability in terms of situation assessment and contribution of effort

THE CONSORTIUM MEMBERS

EXPECTED OUTCOMES

- A collection of enhanced Crisis Management solutions
 - Assessed and recognized benefits
 - Integration of solutions
- A distributed European test-bed enabling the validation of solutions
 - Methodologies enabling replicability
 - Technical capabilities
 - Expertise (knowledge & experience)
 - Complementary and interconnection between the partners making up the test-bed
- A vibrant community of stakeholders and a shared understanding of Crisis Management
 - Across backgrounds
 - Research, first responders, industry and civil society
 - Throughout Europe

CONTRIBUTIONS TO CRISIS MANAGEMENT

- Provide guidance for training and capability development
- Optimize the operational uptake of innovative solutions
- Support EU policy development
- Foster a common understanding
- Enhance the current knowledge on crisis management
- Strengthen the innovation ecosystem

Annex 3: Project poster

Driving Innovation In Crisis Management for European Resilience

Focus & Impact

DRIVER is a demonstration project to improve European crisis management (CM) in parallel to May 2024 until end of 2026. DRIVER is one of the largest security research projects in Europe.

The following figure illustrates the technology & infrastructure enablers (the building), the solution overview, and the business model/partners in the demonstration campaign.

Objectives

The DRIVER project aims at three main objectives:

- The development of a distributed European test-bed for improved CM capability development consisting of:
 - an assembly of concepts and physical connected, distributed operational and training facilities
 - tools for modeling and simulation, test training, test analysis
 - methods for experiment design, campaign planning, analysis, evaluation
 - secure enablers
- The development of a division of emerging concepts (at national level) with national crisis management in member states and EU level
- The creation of a DRIVER Community including all stakeholders in crisis management to foster a more shared understanding of crisis management and innovation across Europe

The three-dimensional fully enabling a strengthened European resilience capability for crisis management

DRIVER Consortium

The DRIVER consortium is composed of 27 partners from 23 different countries. It covers a wide set of complementary capabilities, expertise, background and understanding in coping with Crisis Management.

Focus areas

Based on a gap analysis in the areas of crisis, security, resilience, crisis management, system of systems development (DRIVER will demonstrate focus on three areas:

- Infrastructure resilience
- Professional response
- Interconnecting

To align the concept of demonstration to the specific challenges of crisis management (DRIVER will conduct comparison of experiment activities) to an holistic key elements improvement and synchronization of innovative solutions and to a better understanding of EU Crisis Management System of systems level

@DRIVER_PROJECT
 DRIVER PROJECT

The European Union has provided financial support for this project under the Horizon 2020 programme.

ABOUT US – International, interdisciplinary expertise, first-class crisis management, development, implementation and innovative activities in crisis management (CM) and which is devoted to supporting European countries (the public or private) and assist their companies (public and private) in the face of major disasters or disasters.

DRIVER addresses the needs for European crisis management identified by previous EU funded projects like ADRIAS and EPRIS.

ABOUT US – International, interdisciplinary expertise, first-class crisis management, development, implementation and innovative activities in crisis management (CM) and which is devoted to supporting European countries (the public or private) and assist their companies (public and private) in the face of major disasters or disasters.

DRIVER aims to address deep wide innovation that is based on the systematic development and testing integration of research results to operational implementation of crisis management systems.

- Call policy guidelines
- Professional training (courses & drills)
- Self-learning

In Horizon 2020, a joint call invitation is to:

- Improve crisis management through developing and expansion of crisis management activities
- Improve the operational quality of crisis solutions for future crisis management by strengthening CM, European CM innovation programme

DRIVER addresses these important objectives that are key for building resilience in crisis management, namely: (1) novel CM solutions, (2) novel instruments like courses & exercises, and (3) methodologies and infrastructure to support externally operating development, thereby, the type of innovation and knowledge transfer to affected organisations needed has to be demonstrated by several iterations and testing.

DRIVER will:

- Develop guidance for resiliency development in 34 European countries
- Help countries processing and responding to operational aspects of road solutions
- Support EU policy development
- Strengthen the EU CM innovation programme
- Building an enhanced knowledge base for better of publicly level CM
- Contribute to a more collaborative view on crisis management, by through the development of a shared for critical threat scenarios for EU countries
- Foster a common European crisis management culture and community

To meet these goals DRIVER will design and carry out **Challenges of Resilience**, including crisis management capabilities, exercises and industry, and existing knowledge & infrastructure – a pan-European CM toolkit – to foster European CM capabilities development.

The European Union has provided financial support for this project under the Horizon 2020 programme.

**International Workshop
on Innovation
for Crisis Management
(I4CM)**

I4CM

A major platform
for solution-focused dialogues
among crisis management actors.

Objectives

- GENERATE** solution-focused dialogues among crisis management actors
- PROMOTE** European Excellence in Crisis Management
- DISCUSS** innovative solutions in Crisis management for European resilience
- NETWORK** and share best practices with like-minded professionals
- LEARN** how being involved in European crisis management research and innovation can make a difference for your organization
